

Jacob Pitler

This fan demo shows
how this touch screen
fan will work.

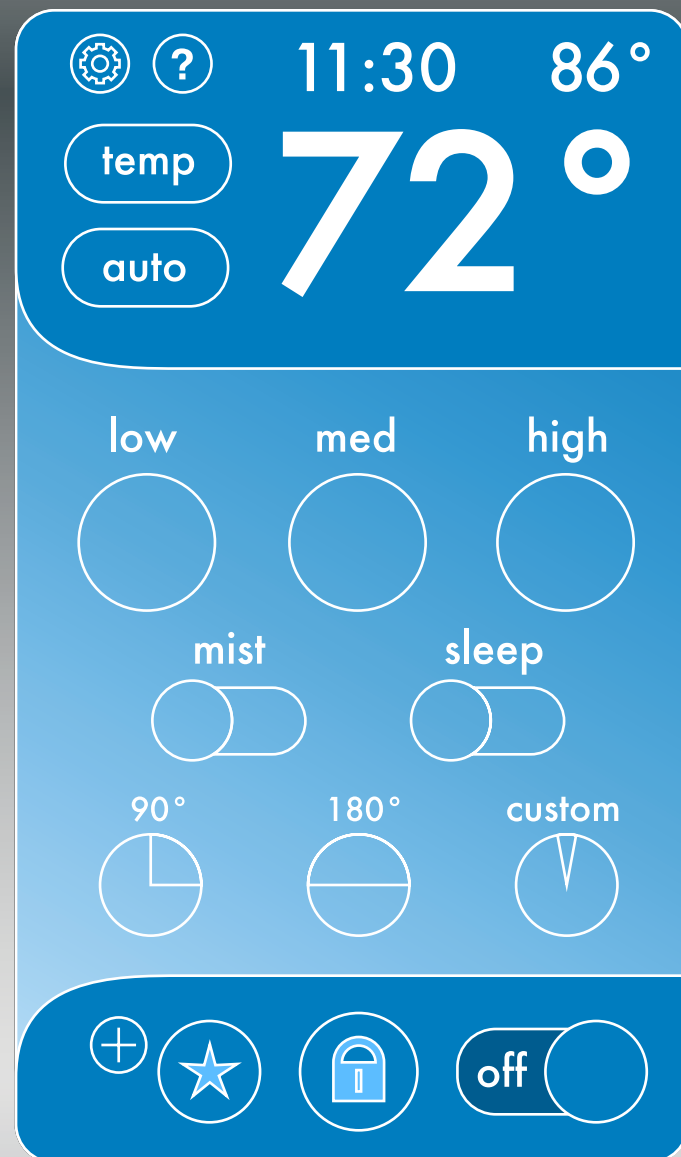

Press the Screen
on the fan to start.

A smartwatch face with a light gray background and rounded corners. It displays the temperature '86°' in a large, bold, dark gray font. Below the temperature, the time '11:30' is shown in a smaller, dark gray font. At the bottom of the watch face, there is a dark gray horizontal bar with a circular slider on the left side, indicating a toggle switch.

86°
11:30

Off screen is displayed
when device is not in
use.

To turn ON click the
slider circle.

This is the home screen.

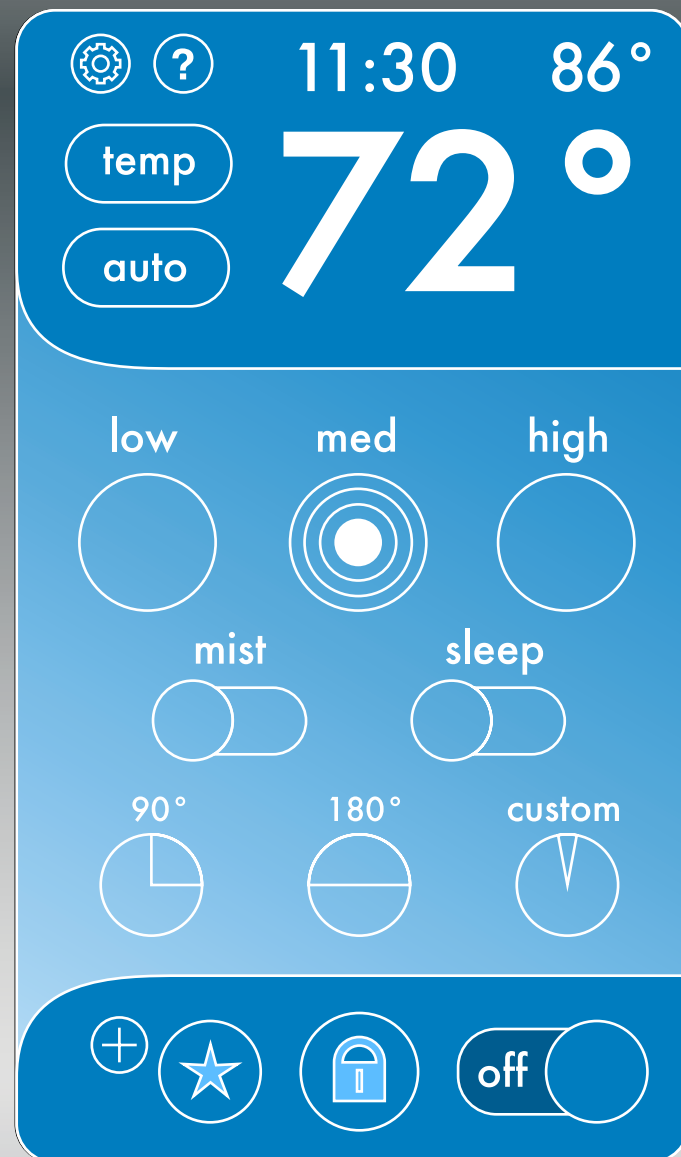

Let us get started.

Click **low button** to set the fan speed to low.

Thats a little to low
try *Medium*.

Click **med button** to
set the fan speed to
Medium.

Still not fast enough

Click **high button** to set the fan speed to high.

High is now selected.

Now let us turn on mist
[click the mist slider.](#)

Now you are wet!

Turn off the mist by
clicking the slider again.

Now that mist is off let us try setting the **sleep** mode.

This is where you set how much time till the fan goes to sleep / or turns off.

To set the time you would slide your finger along the dial.

In this case press the 25 in the middle to up the time.

Now that the time displays 30 minutes let us set it.

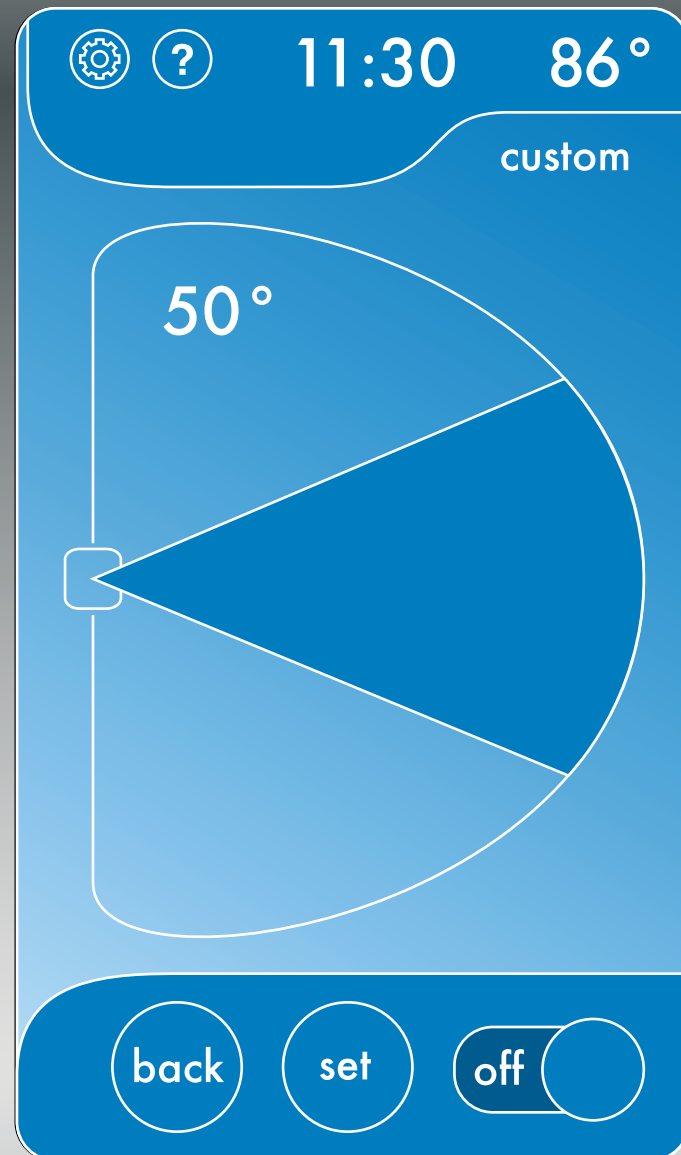

[Click set.](#)

Now the sleep slider shows that it is in the set position or on.

Next let us set custom fan rotation.

Click the custom button.

This is where you set the rotation by pitching the area on the screen.

But in this case there is a 180° preset button back on the home screen.

Press the back button.

Now that you are back

Press the 180° button
located left of the custom
button.

The rotation will stop if you go in to
one of the menus so that it is easier
to make selections

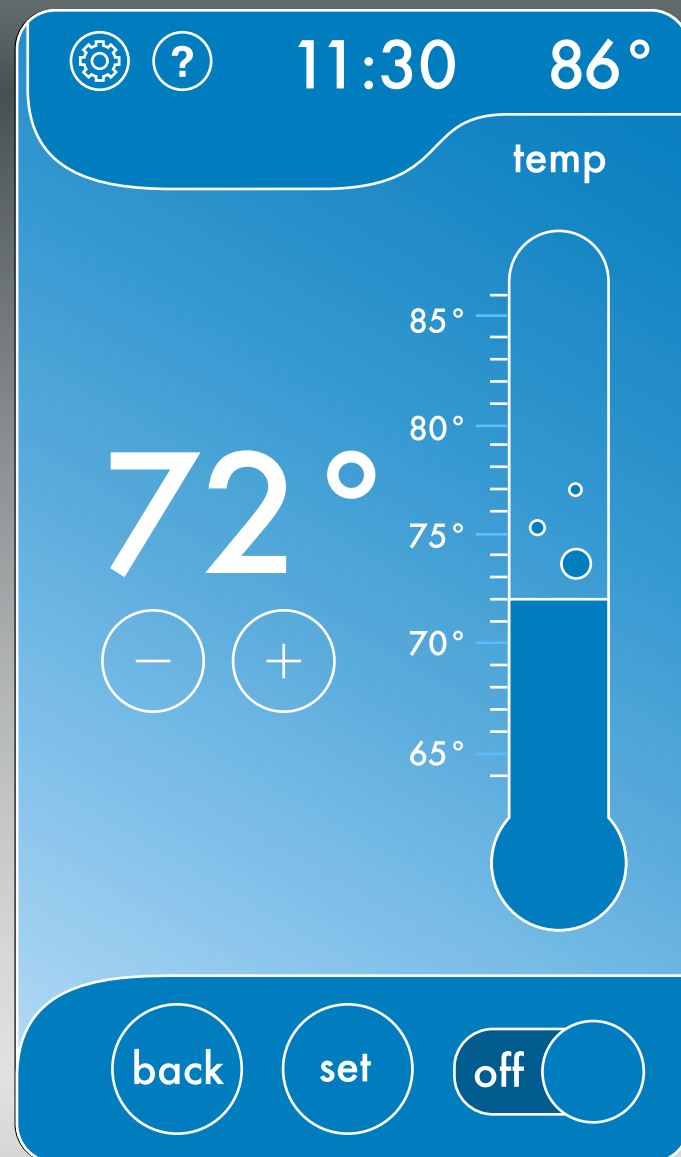

Now we have the rotation set for 180°.

Let us change the temperature it is a little too warm.

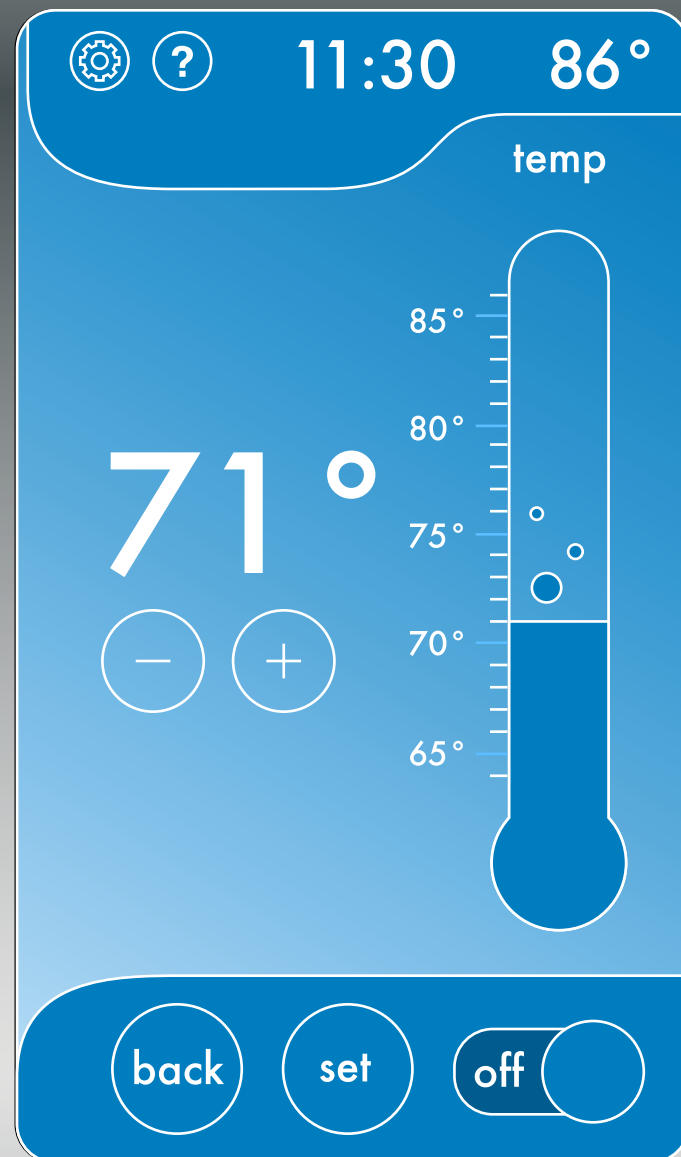

Press temp

The icons will shift and morph to display the temperature screen.

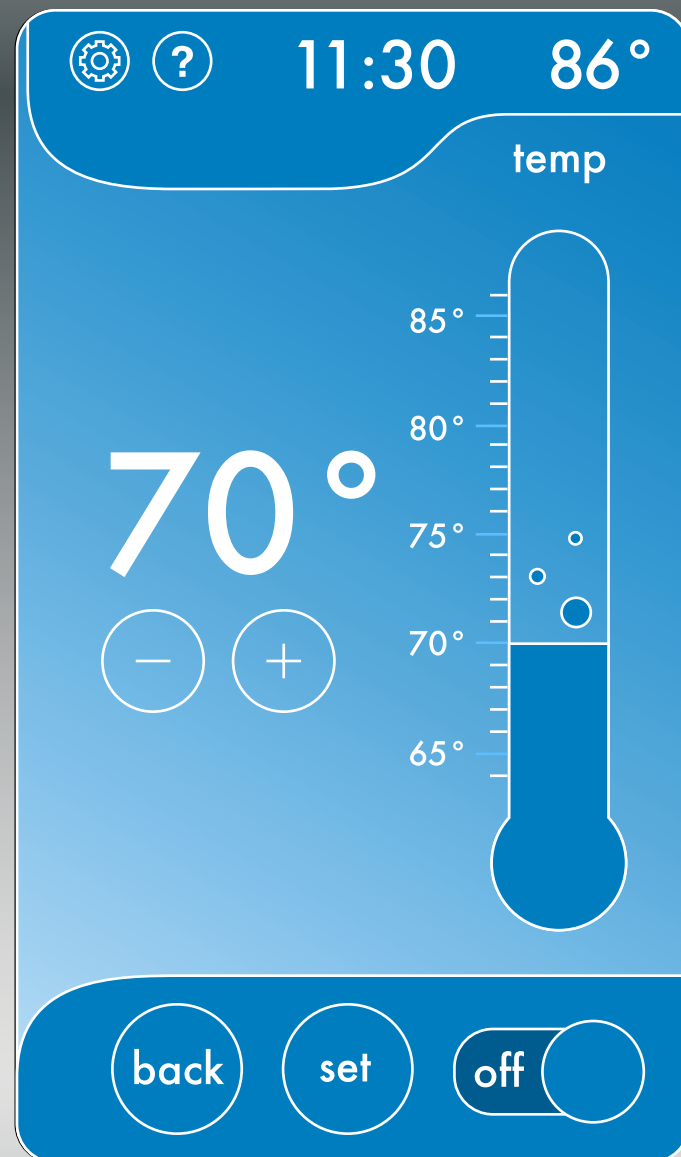

To change the temperature you would be able to slide your finger along the thermostat or use the plus and minus buttons.

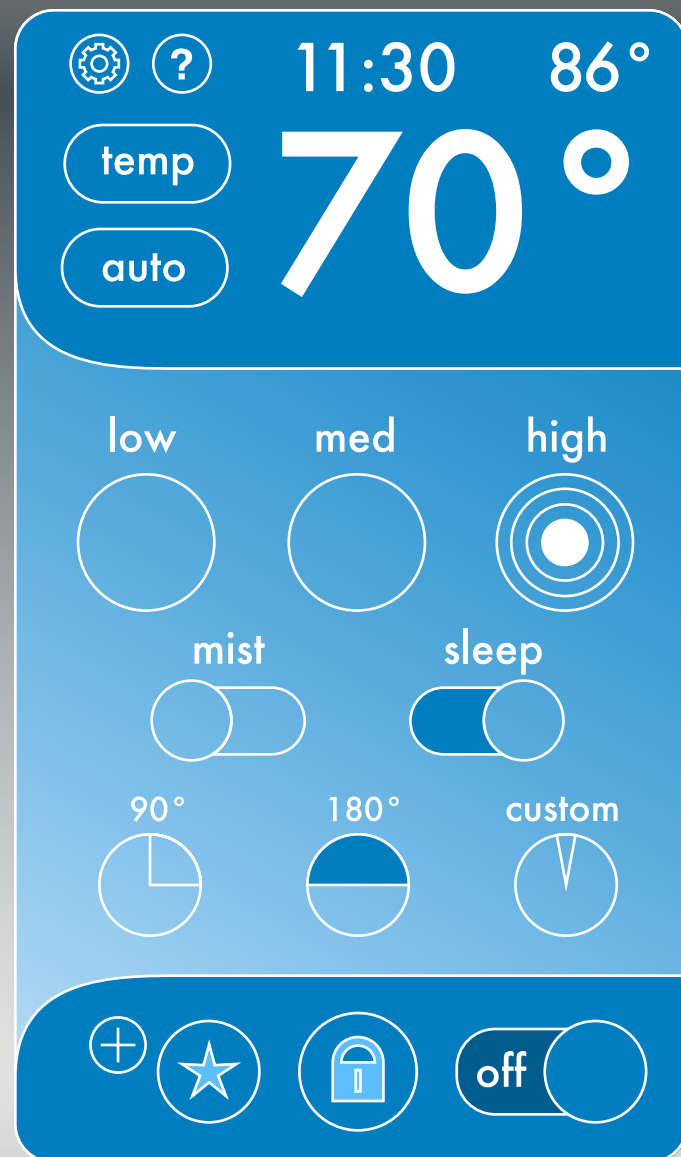

Change the 72° to 70° by clicking the minus button twice.

One more click.

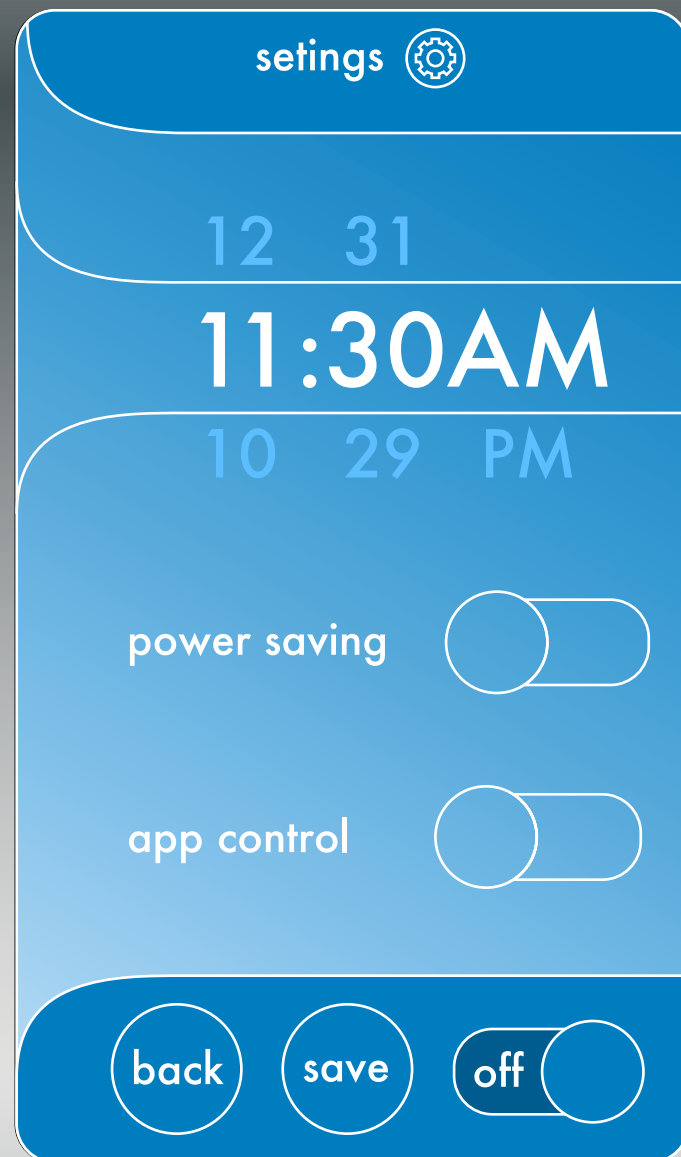

Now that you are at 70°
press **set**.

Next let us take a look
at the settings.

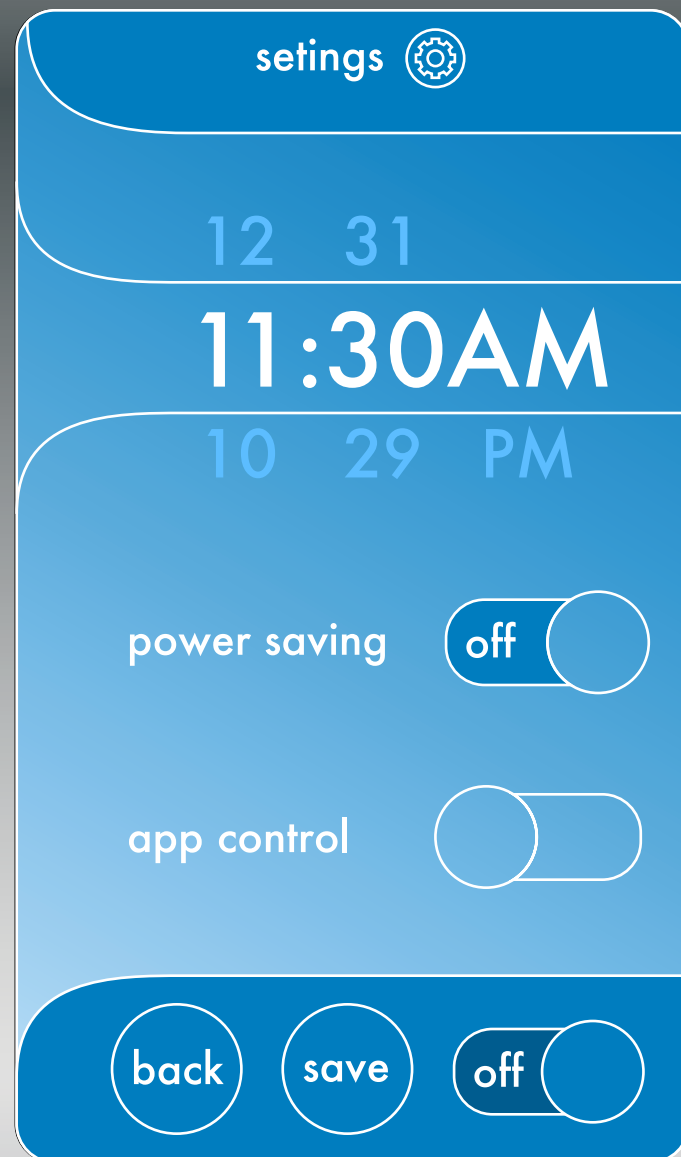

Press the gear in the
upper left corner.

This is the settings page.
On the actual screen you
would be able to scroll
through the time and set it.

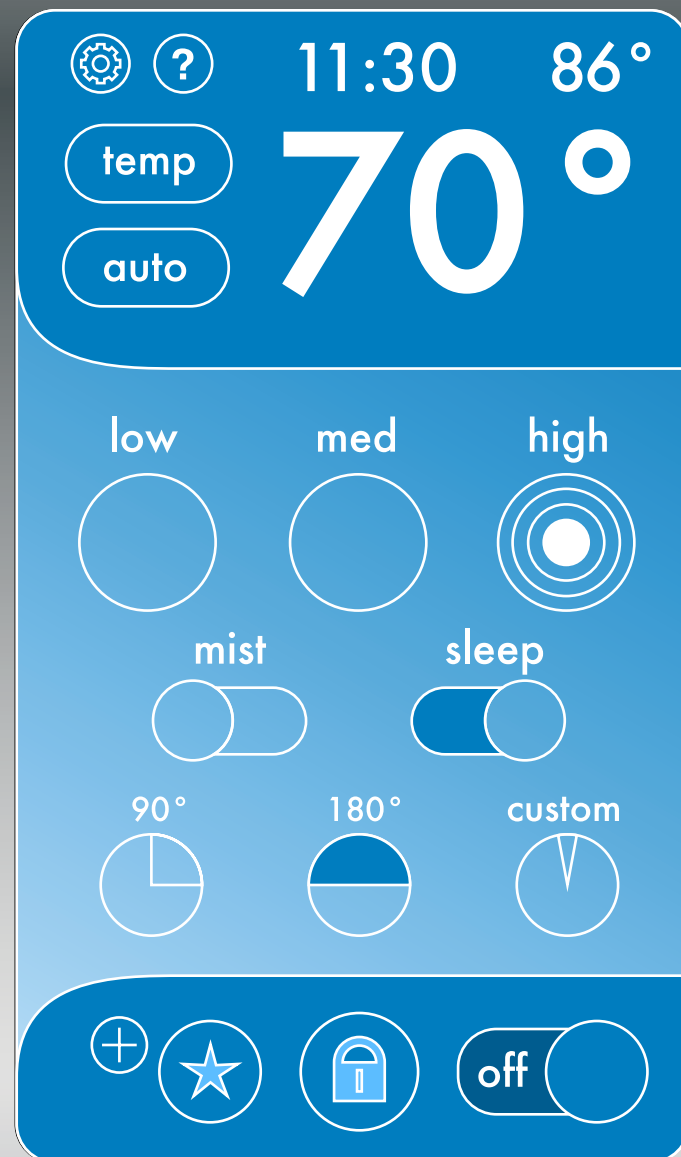

The other settings are a
power savings mode which
helps to conserve energy.
And a way to make it
controlled from an app on
your phone.

[Click power saving slider](#)

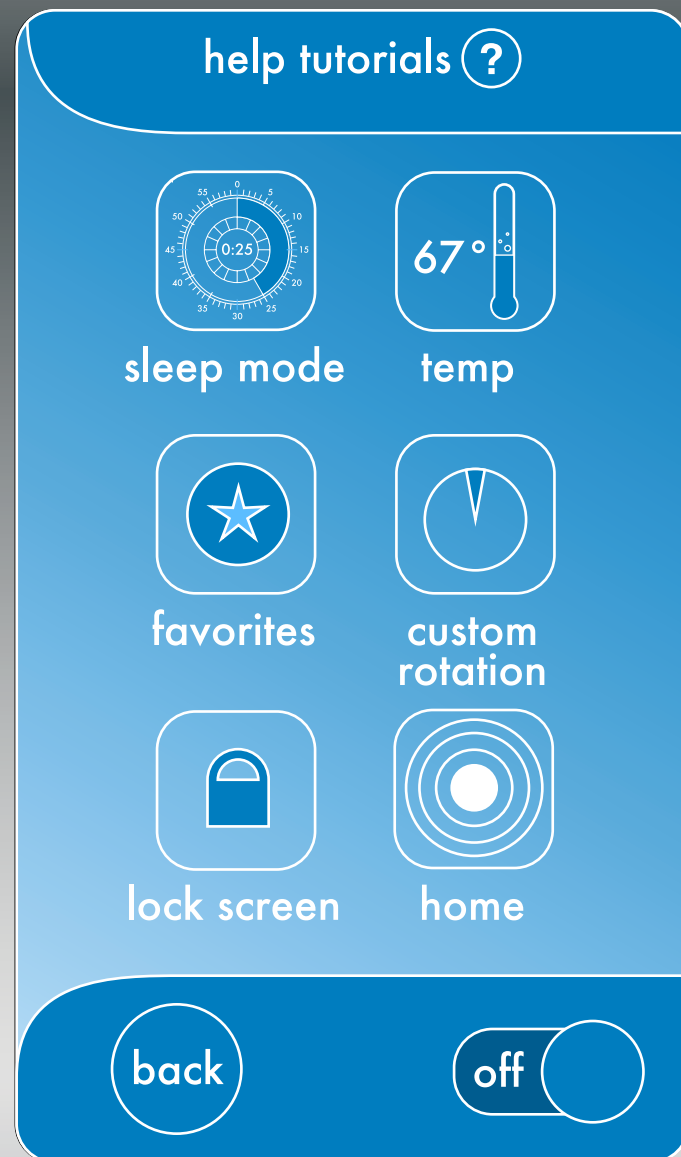

Good

Now click save

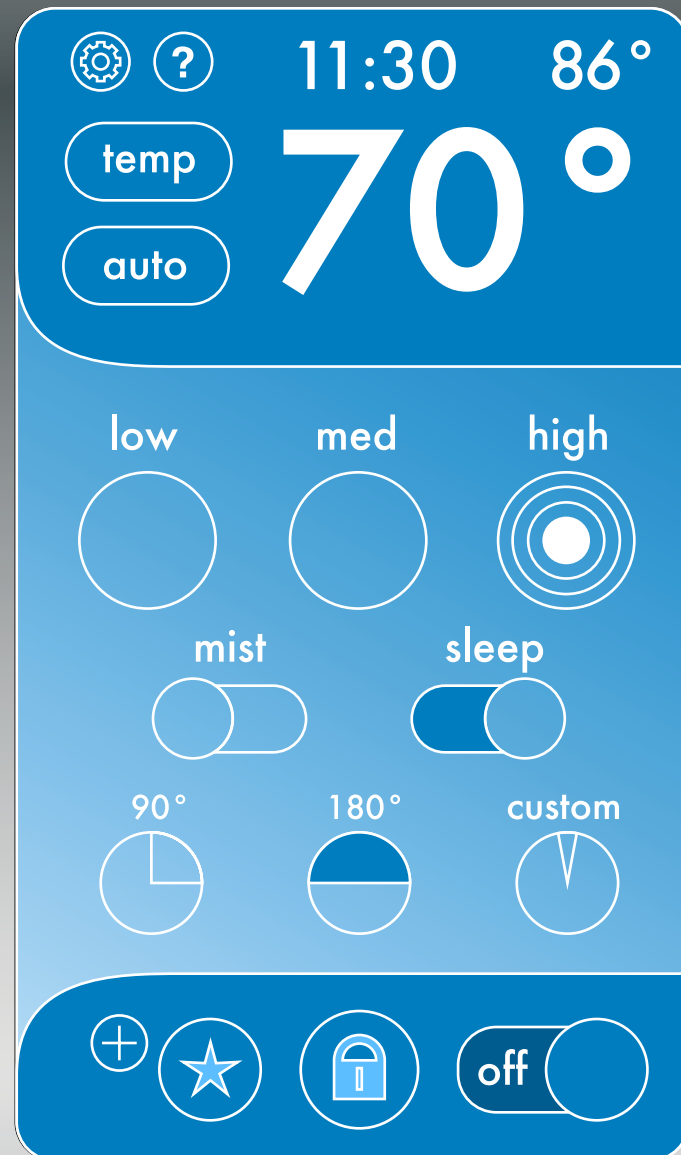

Let us check what the help page looks like.

Press the ? button in upper left corner

The help page will have little mini video tutorials to introduce you to the device.

Let us go to the home page
[press the back button](#)

Try out the lock screen

This will lock your settings and help conserve power.

Click the lock button which would be a press and hold.

Lock screen slides in from left.

This is the lock screen it displays the settings previously selected you cannot change them until you unlock the device.

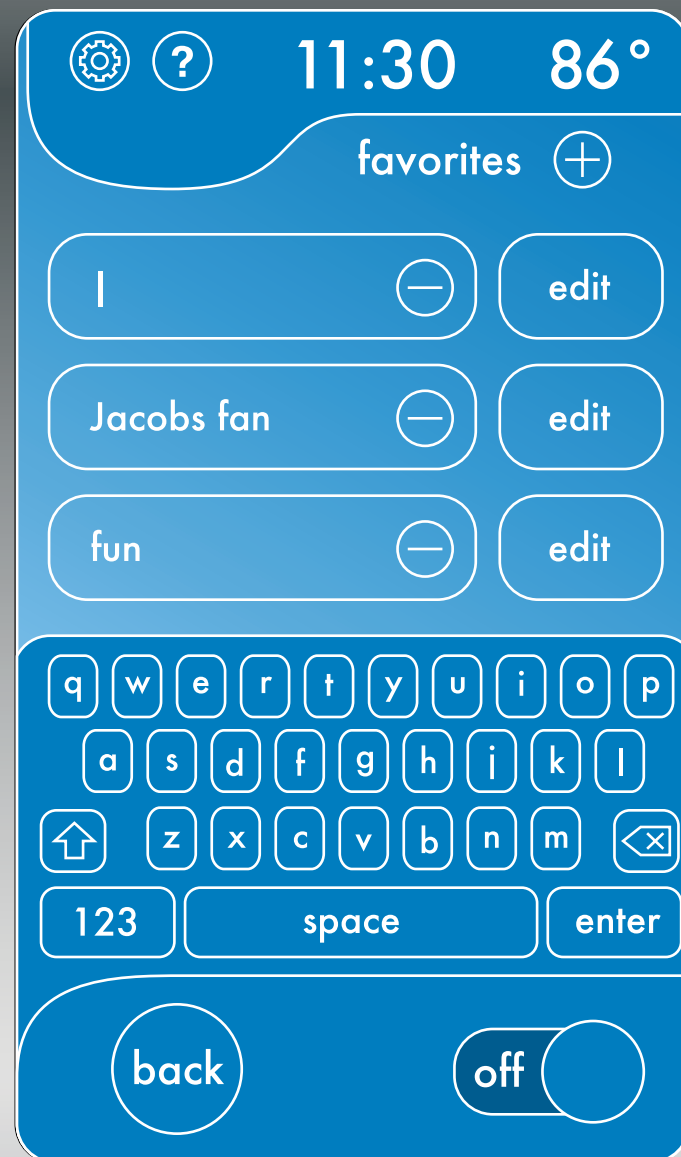

Unlock the device
[click the slider circle.](#)

These are good settings
let us make it a favorite.

Click the plus sign button
next to the star.

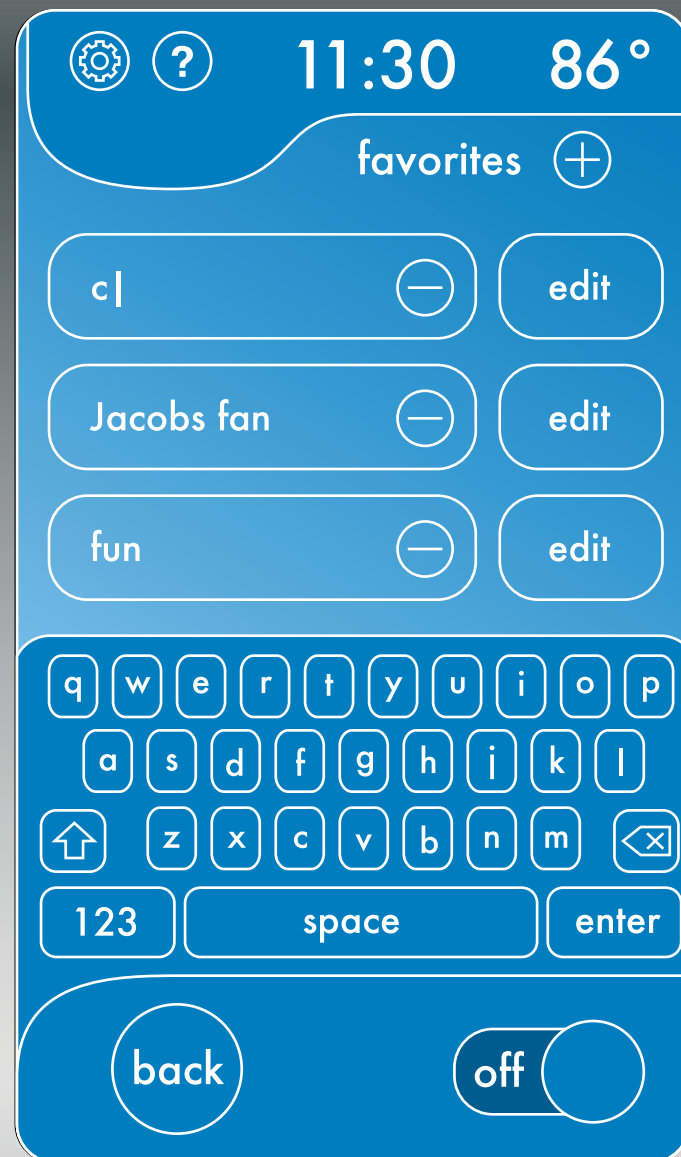

This will morph into the
favorites page.

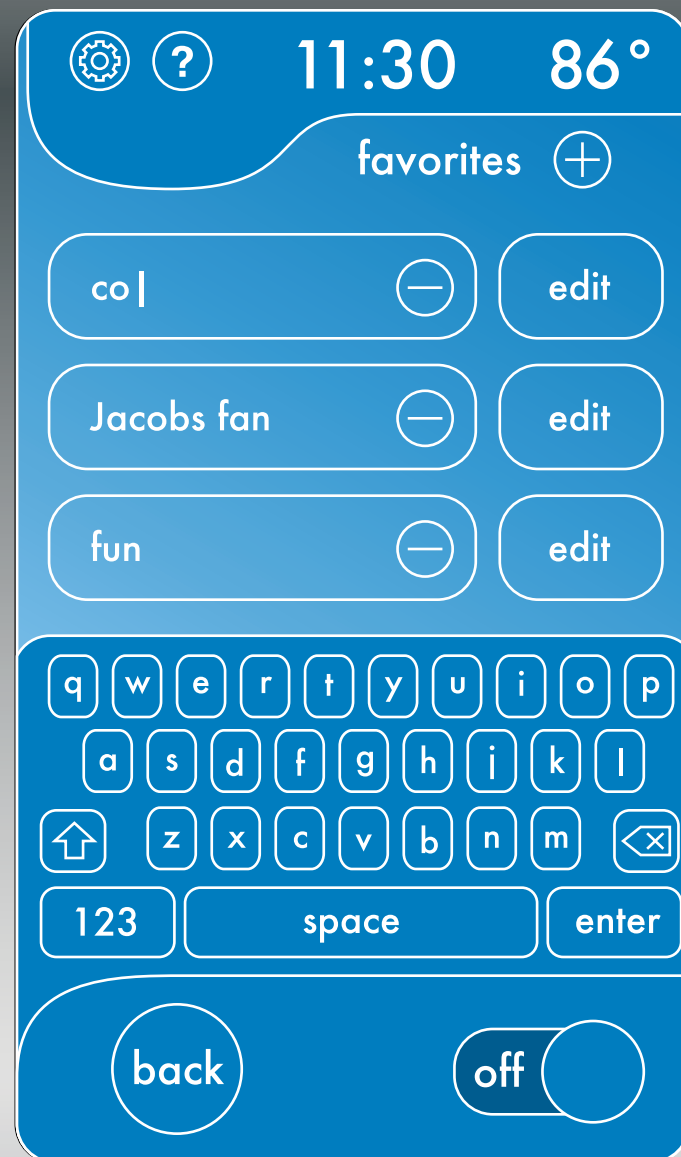

Here is the favorites page.

Lets name it "cool"

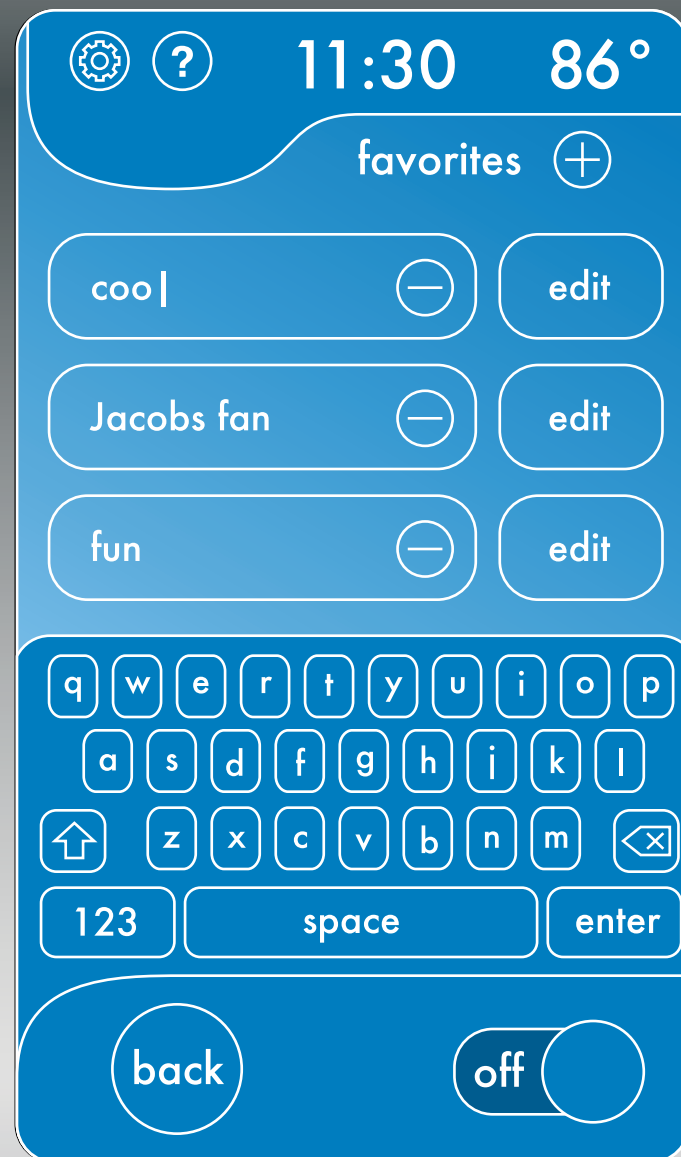

Type c

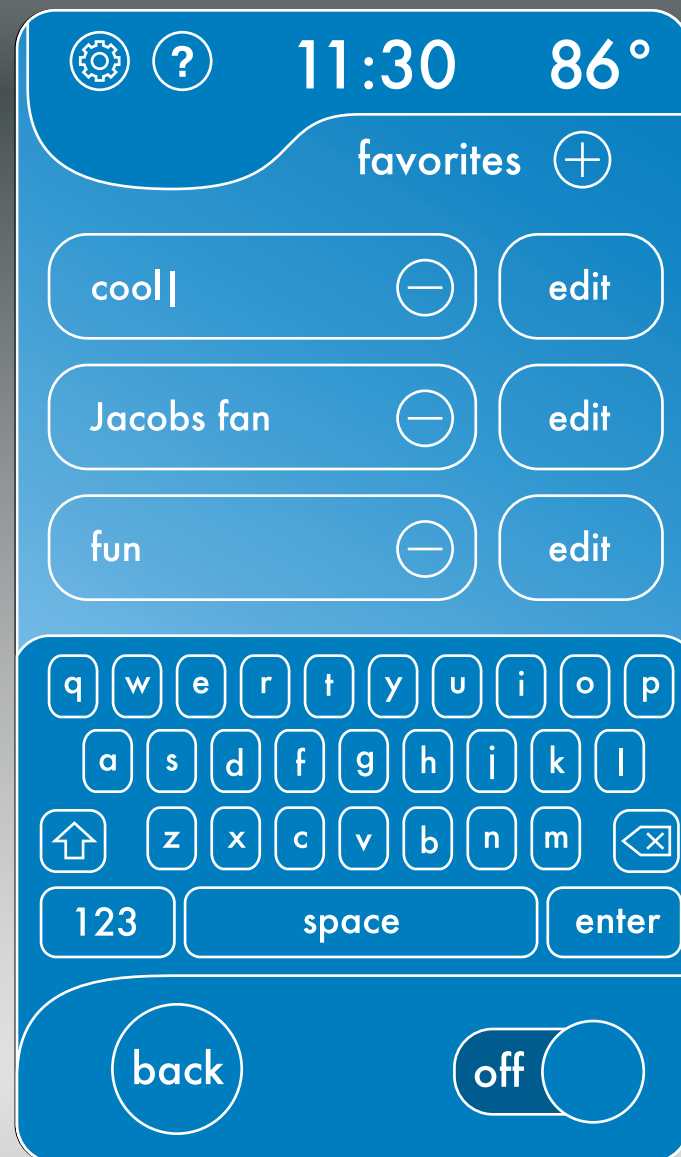

Type o

Type o again

Type I

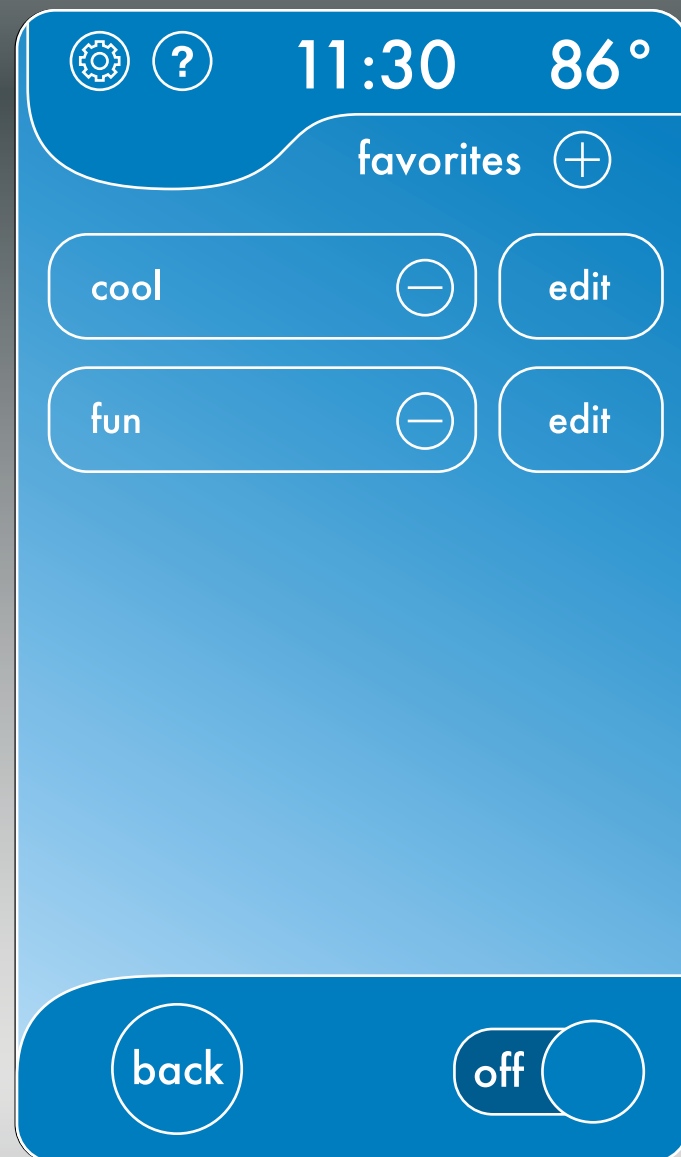

Press Enter

Ok looks good now lets delete something, how about Jacobs Fan.

Click the **Minus – sign** next to Jacobs Fan

All set go back to the home page.

Press back.

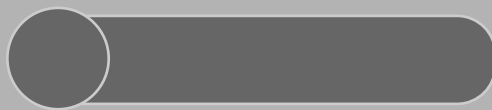

Now the name cool appears just below and to the right of the 70°.

Ok time to turn the fan off, don't want to get to cold.

Press the off slider circle.

86°
11:30

If you would like to go
through again

Press the on slider circle.

Thank you, good-bye.
